

BACKGROUND

C. A. Motzko and Associates is a leading provider for enterprise-wide metrology and calibration management solutions. The deliverables are custom designed to assist each client in maintaining a competitive advantage through the management of their critical test processes and support equipment. This is accomplished by having an agile architecture that lends itself to fast implementation and sustainable benefits.

Today, Dr. Motzko is Senior Principle of C. A. Motzko & Associates. His consultancy is built on the premise that the challenge going forward is the training and education of technicians, engineers, managers and executives for success in implementing the Total Metrology Management Process.

As a State of California Registered Professional Engineer in Quality, Dr. Motzko helped shape the direction of test equipment management during the industry's critical early years. Dr. Motzko began to concentrate his work in test equipment management starting in the early 1980s when, as Vice President of Electro Rent's Equipment Information and Management Group, he helped develop the company's strategic information system to support the full spectrum of product management and delivered services. This integrated system presented a compelling vision of the enormous opportunity and sustainable benefits available in the proper employment of logistics, service and support of test equipment.

This work was expanded on in association with several other rental and equipment brokerage companies. This culminating in a long-term consulting engagement with a Fortune 5 company in the design, development and implementation of a full spectrum asset management offering. With mergers and acquisitions this asset management business unit was acquired by a group of former executives, including Mr. Motzko, and spun off as a separate company engaged in asset management. Mr. Motzko's three plus decades of steady devotion to metrology, calibration and equipment management has provided the underlying support for these efforts. Dr. Motzko is best known for his pioneering work on the topic of test equipment utilization and deployment.

Dr. Motzko did his undergraduate work in Physics at Florida State University, received his BS from the University of Redlands, his MBA from the Anderson Graduate School of Management, University of California, Los Angeles, and his Doctorate from the School of Advanced Studies, University of Phoenix.
